Vaccinosis—Aggression, Fear and Bio-Algae Concentrates

*Kizzy continues to do wonderfully since starting to take bio-algae concentrates. She has rabies **vaccinosis**, but her aggression symptoms continue to lessen. Before starting your product, when we would pass a dog on our walks, she would be very nervous and would growl and bark at the dog. Even if the dog was across the street, she would show aggression. Now she is much, much calmer when we pass dogs. In fact, this morning on our walk, we were confronted by a loose dog that came running out of an open door, and Kizzy's reaction was extremely mild compared to what it would have been a year ago — she barely even made a sound!*

Also, Kizzy used to be very leery of people. If I stopped to talk to a neighbor during our walks, she would growl at the person. She also growled at people who came in our house. Now, she is very relaxed with new people — even going up to them so that they can pet her.

The improvement in Kizzy's ability to stay calm is amazing!

*This is FABULOUS!!
Gail, Kinga, and Kizzy*

*(07/09/07 update: Kizzy has been on 2 capsules a day now and I have to report to you—it just keeps getting better and better. Yesterday we were at an agility trial and her **behavior was excellent!** She was **very calm, even lying down within 3 feet of other dogs** while waiting for our turn in the ring!) [Editor's note: this is one of the many long-term benefits from using whole food nutrition rather than specific supplements, herbs and other 'holistic' remedies just to address the vaccinosis, fear and aggression (all symptoms) in animals.]*

*I started our other dog Lil' Boomer on the Formula 2 that I originally bought for the cat and started at the amount you suggested for her size, one in the A.M. and one in the P.M. I thought she was in good shape and that she was just getting older when she did not jump in the window, sofa, or bed as often. But boy since she started on this product the change has been wonderful. She seems to be more agile. But the change I saw and love the most is her reaction to the **thunder storms**. It is not that they do not bother her anymore but she does handle them with a little less stress and once the storm passes she recovers more quickly. It used to take hours before she would stop panting, shaking, and sticking to me like glue. Now, within about half an hour of the storm passing, she **relaxes**.*

Lisa B.

Bio-algae concentrates have no advertised ingredients specifically addressing fear and aggression or producing calm. And yet look at the results customers are reporting. How did bio-algae concentrates accomplish this feat? It did not. Bio-algae concentrates simply supplied the body with the super nutrients of Omega 3, 6, 9 and GLAs (gamma linolenic

acid), ALAs (Alpha-Linolenic Acids), DGLA (Dihomogamma-Linolenic Acid), DHA (Docosahexaenoic acid) and more fatty acids, over 4,000 plant enzymes, 20 amino acids, Vitamins A, B vitamin complex, C, D, E, K, phytonutrients, super antioxidants and thousands of other nutrients so the body could normalize the entire endocrine (glandular) system and naturally and holistically balance the whole body. When the whole body is hormonally balanced and all the glands (for example, adrenals and thyroid) and organs are functioning at 100%, then the emotions can respond appropriately rather than reacting from a point of fear or aggression. Bio-algae concentrates are such a revolutionary product (concept) they are 100 years ahead of their time. Now that is true holistic wellness!

These results are individual testimonies. We cannot guarantee your results will be the same. Since each individual body responds differently to the super nutrition in bio-algae concentrates, your results will be different. These statements have not been evaluated by the FDA. This information is not intended to diagnose, treat, prevent or cure any disease.
