BIOPROTEC EFFECT ON HUMAN ENERGY LEVELS

According to a study from the Neurological Hospital of the University of Freiburg in Germany, cellular telephones' high-frequency electromagnetic fields lead to a significant increase in blood pressure. Pulsed high-frequency fields, as used with cellular telephones, affect biological processes in the brain, which are measurable in electroencephalograms (EEG). It is beyond question that cellular telephones influence the brain's bioelectric activity.

It has been proven that electromagnetic and radio wave radiation affect the human brain and body. Commands originating in the brain can be transmitted incorrectly, resulting in the body's flawed functioning. Furthermore, this could lead to defective cell metabolism, followed by organ failures. Long-term exposure leads to tissue damage, which could cause a multitude of health problems.

THERMOGRAPHIC IMAGING

SOLUTION:
With Bioprotect

Converts [EMF] or [EMR] waves into harmless biowaves that act in harmony with the human body.

AFTER

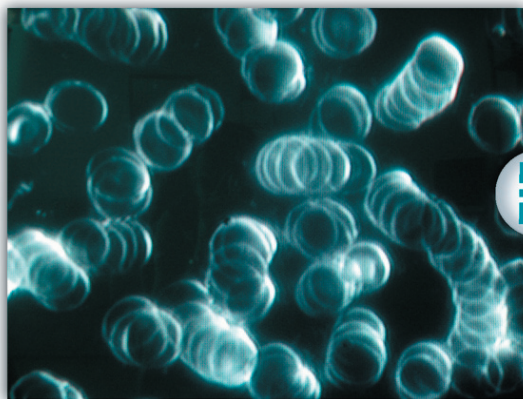

PROBLEM:
Without Bioprotect

Harmful, bio-disruptive [EMF] or [EMR] waves tremendously impair the blood and brain chemical barrier.

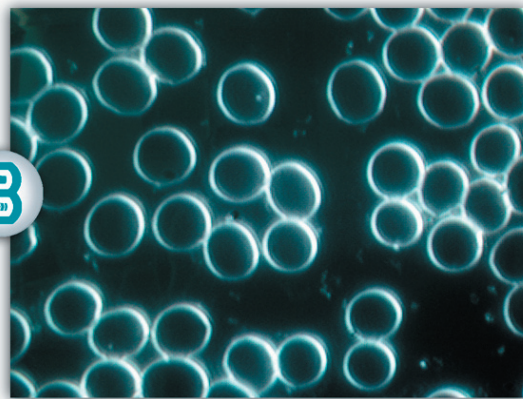

BEFORE

HUMAN CELLULAR STUDY

Using Cellphone
Without Bioprotect

Using Cellphone
With Bioprotect

First image shows blood in rouleaux and otherwise much less healthy looking condition after having used an unprotected cell phone for approximately five minutes. When the red blood cells are not free floating, delivery of oxygen and nutrients is greatly impaired. This leads to deterioration of health and lack of toxin removal.

Second image, next day, shows red blood cells again floating freely, after a Bioprotect chip has been placed on the cell phone and using the phone for five minutes.
