

BioPreparation and Animals

Russell Louie, Optimum Choices, LLC
Roland Thomas, N.D., BioAge, LLC

Agenda

- 🐾 Why animals need supplements
- 🐾 Difference between natural versus holistic supplements
- 🐾 Why BioPreparation is the perfect holistic animal product
- 🐾 What makes BioPreparation a quantum leap in holistic animal healthcare
- 🐾 BioPreparation testimonials and case study
- 🐾 What can BioPreparation do for your pet
- 🐾 Questions from the audience

Sobering Statistics

 **Nearly 50 percent of natural deaths in older cats and dogs are attributed to cancer.**

(Morris Animal Foundation Study, January 25, 2005)

 **Over 60% of Golden Retrievers will die of cancer. Moreover, approximately 400 out of 1000 dogs will develop cancer and close to 200 out of 1000 cats will develop feline leukemia.**

Kali's Wish Cancer Foundation, (www.kaliswish.com)

 **Life span of America's companion animals is now half what it was in the 1950's and 1960's.**

(Bell, Kristen Lee, *Holistic Aromatherapy for Animals*, 2002, p.VIII)

 **Forty years ago the average Golden Retriever lived to be fifteen or sixteen, while house cats routinely lived into their twenties. Today the Golden Retriever's life expectancy is seven years.**

(Bell, Kristen Lee, *Holistic Aromatherapy for Animals*, 2002, P. VIII)

What You Can Do to Prevent Your Pet from Becoming a Statistic

Experts acknowledge that one way to deal
with cancer is to take charge of what the
canine cancer patient eats.

(Whole Dog Journal, Vol. 6 No. 11, Nov, 2003)

The Whole Dog Journal Anti-Cancer Diet

(Whole Dog Journal, Vol. 6 No. 11, Nov, 2003)

-  All ingredients should be highly bioavailable and easily digestible
-  Holistic practitioners recommend organic food
-  Fresh organic meats
-  Fish oil supplements rich in Omega-3
-  Vitamin C
-  Fresh vegetables
-  Digestive enzymes
-  Garlic
-  Safflower oil
-  Limited carbohydrates

Dogs & Cats are Carnivores

FACTS:

- 🐕 Dogs needs 60–80% meat protein for optimum health
- 🐈 Cats (obligate carnivores) need 70–90% meat protein
- 🐕 Dry kibbles cannot be manufactured with more than 50% meat because it gums up the machinery

CONCLUSION:

If you feed dry kibbles to your pet, they are getting a nutrient deficient diet.

Enzymes

- Enzymes are catalysts that improve digestion, reduce inflammation & pain, speed healing, and prevent premature aging, arthritis, tumors and cancer
- Lack of enzymes can result in allergies, intestinal disorders, toxic overload, pancreatitis, premature aging, weak immune system
- Life would be impossible without live enzymes

Enzymes

FACT:

Heat kills live enzymes—118° dry heat or 150° wet heat

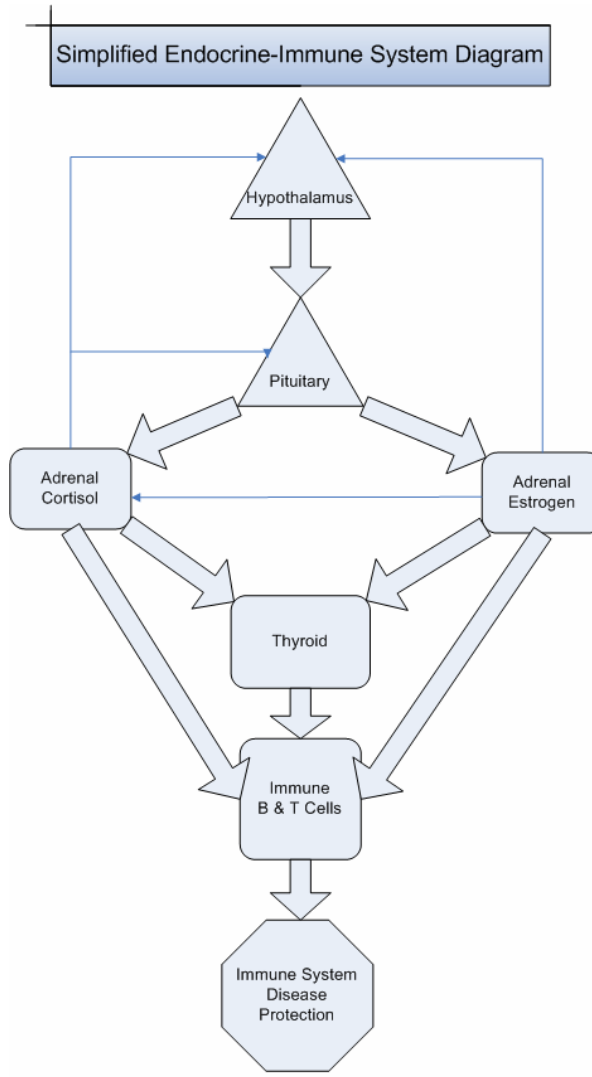

CONCLUSION:

All processed food (canned and dry kibbles) lack live enzymes.

Silent Epidemic

- Cancer
- Obesity
- FeLV, FIP, FIV
- Chronic infections
- Unresolved allergies
- Autoimmune disorders
- Inflammatory bowel disease
- Sensitivity to food or insect bites
- Illnesses unresponsive to conventional treatment

**From Pets at Risk: From Allergies to Cancer,
Remedies for an Unsuspected Epidemic**
by Alfred Plechner, DVM

Which is a better source for Vitamin C?

- **Ascorbic Acid**

- **Green peppers**

Results of Isolated Supplementation

- Early infant multivitamin supplementation is associated with increased risk for food allergy and asthma.
- There is now strong evidence that antioxidant supplements—vitamins A, C and E and beta carotene—are not effective in protecting against gastrointestinal cancer. On the contrary, there may be a small increase in mortality from these tumors among people taking antioxidants compared with a placebo.
- Most women take hormone replacement therapy, or HRT, for the immediate symptomatic relief... We already knew the impact of HRT on breast cancer, colon cancer, blood clots and stroke.

Recommendations by Authorities

- To reduce cancer risk, the best advice presently is to consume antioxidants through food sources, rather than supplements. (“Common Questions About Diet and Cancer,” **American Cancer Society**)
- “...there are insufficient data to justify an alteration in public health policy from one that emphasizes food and diet to one that emphasizes nutrient supplements. (“Essential Nutrients: Food or Supplements?” ***Journal of the American Medical Association***, 2005;294:351-358)

Quantum Leap in Holistic Nutrition

Super Nutrition
BioPreparation/BioSuperfood

Superfoods
Algae, Spirulina, Kelp
Garlic, Bee Pollen, Fish oils
Cod Liver Oil, Wheat Germ Oil
Noni Juice, Wolfberry

Whole Food Supplements
Fruits—oranges, apples, blueberries
Vegetables—broccoli, tomatoes
Nuts—almonds, pecans, cashews
Seeds—flax, sunflower, sesame
Meat/Fish—salmon, sardines, organ meats

Isolated supplements
Vitamin A, B, C, Calcium
Adrenal, Thyroid glandulars
Drugs

Why BioPreparation is the Perfect Holistic Animal Product

1. Animals instinctually eat algae whenever they drink from a natural body of water (e.g., pond, stream).
2. Nature determined the exact formula of ingredients not a scientist. (Dr. Kiriatic provided the exact proportions of each algae and Spirulina blend).
3. BioPreparation contains over 4,000 live enzymes.
4. BioPreparation does not treat the symptoms. Very little side effects.
5. BioPreparation helps the body cleanse the intestines. With increased efficiency and nutrient absorption one can reduce the dosage (as well as other natural products) as the body heals itself.
6. BioPreparation is fast acting.

What Makes BioPreparation a Quantum Leap in Animal Healthcare

1. BP has a synergistic effect not found when taking single alga.
2. BP feeds the master glands of the brain. More holistic approach to wellness.
3. BP is not a fixture for life like most allopathic remedies. The dosage and even the potency of the formula can be reduced over time.
4. BP is customized for animals by:
 - a) Freeze-drying at a lower temperature for better assimilation in animals.
 - b) Grinding to a finer powder for faster assimilation by animals.
 - c) Using a higher grade of Astaxanthin for more antioxidant power for animals.
5. BP has been clinically proven to reduce cancer and tumors in animals.
6. BP awakens the animal's own natural ability to heal.

BioPreparation Animal Testimonials

1. 17-year old cat dying of kidney disease — saw an amazing improvement after just a couple of days on it. MAL
2. Dog scheduled to have \$2,000 worth of arthritis surgery — doing better, more demonstration of flexibility, etc. No surgery plans. CB
3. Dog with auto-immune disorder (not manufacturing red blood cells) — 95% of dogs die in less than 6 months, other 5% die after 6 months. After being on BAC for six months we went hiking recently and our dog was running on the path. DB
4. Hypothyroid cat — after BAC her energy level and appetite improve, she is skinnier, her thyroid levels tested normal. RJL

BioPreparation Case Study

Baby Bear— 7 yr old, German Shepherd/ Husky mix, diagnosed with mast cell cancer tumor on his paw. To save Baby Bear's paw the standard protocol of cutting out the entire tumor plus a 3 cm perimeter was not followed. Radiation or chemotherapy was recommended but declined.

May 22, 2004 — after surgery to remove most of the mast cell tumor. Started BP on one pinch/day.

June 5, 2004 — after 15 days on BP, May 22–May 28 = one pinch per day; May 29–June 5 = ½ capsule per day

July 13, 2004 — seven weeks after starting BP, June 5–June 30
= ½ capsule per day; July 1–July 13 = one capsule per day

July 31, 2004 — ten weeks after starting BP, July 14–July 21 = one capsule per day; July 22–July 31 = 1-½ capsules per day

Baby Bear Today

What Can BioPreparation Do for Your Pet?

- 🐕 Accelerate healing
- 🐕 Improve digestion
- 🐕 Detoxify their body
- 🐕 Produce silkier, shinier coat
- 🐕 Relieve arthritis, gain flexibility
- 🐕 Balance hormonal disorders
- 🐕 Prevent tumors and cancer
- 🐕 Stimulate their immune system
- 🐕 Enhance growth and tissue repair
- 🐕 Help prevent degenerative diseases
- 🐕 Balance mood and calm emotions
- 🐕 Reduce illness and veterinarian bills
- 🐕 Achieve optimum health and longer life
